

Prycing

Channable integration | EN

With the power of rules, Channable is the largest platform in the market when it comes to easily setting smart rules.

For this reason, we work with Channable to combine the powers of price and market data with the power of rules. We believe that Prycing in combination with Channable will take your profits to a higher level. There are endless possibilities to set smart rules based on profit, margin and market position.

Are you ready to start generating better campaigns, feeds, etc. to realize more profits?

In this instruction we explain step by step how you can connect Prycing to Channable.

Prycing

Starting is simple!

- 1** Log in to Prycing go to “Data communication”
- 2** Copy the XML link under “Prycing data (For external programs)”
- 3** Log in to Channable and go to “Setup”
- 4** Click on “XML” in the import setup. If you already have an import, click “Combine imports”.
- 5** Enter a name for the Import. For example: “Prycing Data”
- 6** At “XML file url” you can paste the XML that you previously copied in Prycing. You can leave the checkbox set to “No authentication”.
- 7** Leave encoding set to “Automatically detect”. Click on “save”
- 8** You will be asked to specify the mapping. This is often already set correctly by default.
- 9** It is advisable to choose “combine on field”
- 10** Click on “Save & Import”. You are now ready to use Prycing in Channable.

Prycing

Follow the steps

1

Log in to Prycing go to “Data communication”

2

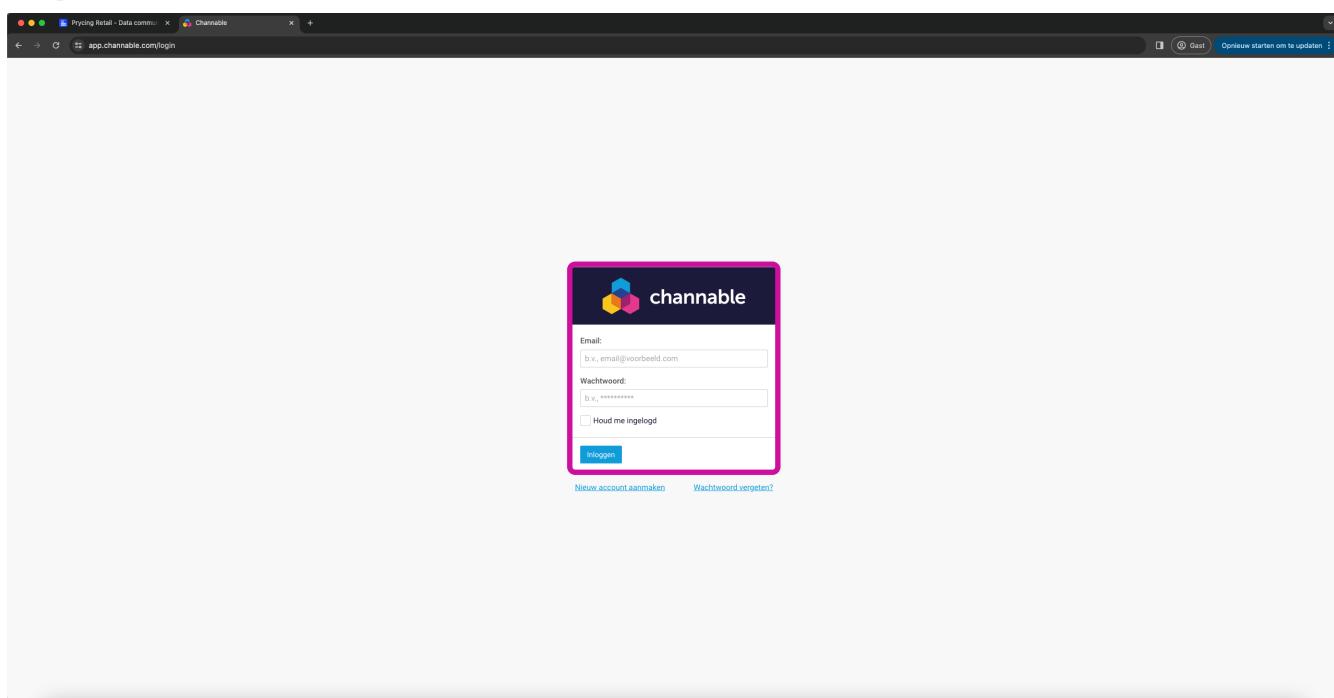

Copy the XML link under “Prycing data (For external programs)”

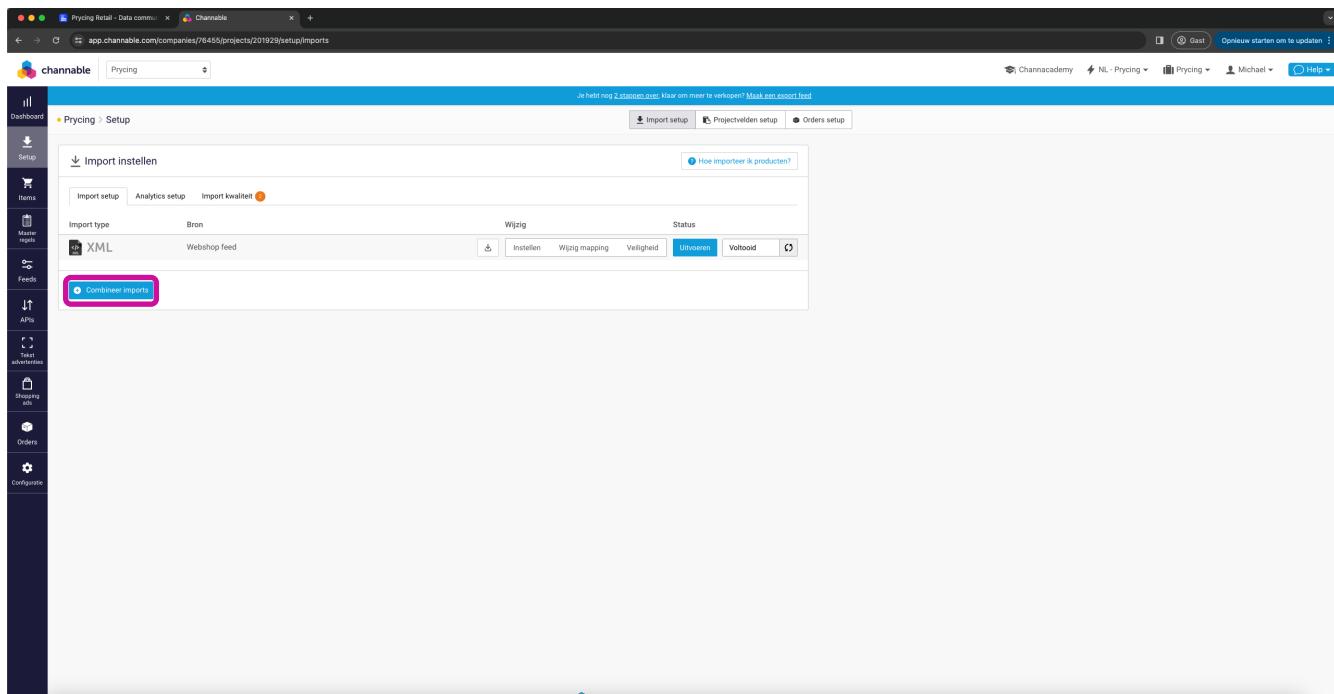

3

Log in to Channable and go to “Setup”

4

Click on “XML” in the import setup. If you already have an import, click “Combine imports”

Prycing

5

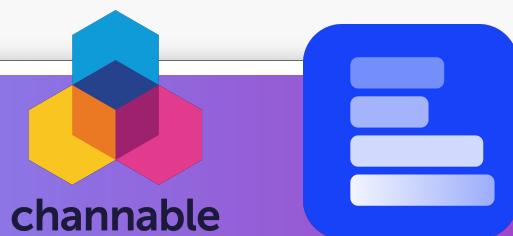

Enter a name for the Import. For example: “Prycing Data”

The screenshot shows the Channable import setup interface. On the left, there's a sidebar with various icons for Dashboard, Setup, Items, Master regels, Feeds, APIs, Text advertenties, Shopping ads, Orders, and Configuration. The main area is titled "Import setup" under "Pricing - Setup". It shows an "Importer vanuit:" section with "XML" selected. A "Naam:" field contains "Prycing data" with an "Optional" note next to it. Below that is an "XML-bestand url:" field containing "https:// bv. https://www.voorbeeld.com/feed" and a dropdown for "Geen authenticatie". There's also an "Encoderen:" dropdown set to "Automatisch detecteren". At the bottom right of the form is a blue "Opslaan" button.

6

At “XML file url” you can paste the XML that you previously copied in Prycing. You can leave the checkbox set to “No authentication”

This screenshot is identical to the one above, showing the Channable import setup interface. The "XML-bestand url:" field at the bottom is highlighted with a pink rectangle, indicating where the user should paste the copied XML URL from Prycing. The rest of the interface, including the "Naam:" field and the "Geen authenticatie" dropdown, remains the same.

7

Leave encoding set to “Automatically detect”. Click on “save”

The screenshot shows the 'Import setup' section of the Channable interface. It includes fields for 'Naam:' (Name) set to 'Pricing data', 'XML-bestand url:' (XML file URL) set to 'https://', and 'Encodering:' (Encoding) set to 'Automatisch detecteren' (Automatically detect). The 'Opslaan' (Save) button at the bottom left is highlighted with a pink box.

8

You will be asked to specify the mapping. This is often already set correctly by default

The screenshot shows the 'Wijzig mapping' (Edit mapping) page. It displays a grid of import fields on the left and project fields on the right, with mapping arrows indicating the relationship between them. A large pink box highlights this grid area. Below the grid, there are sections for 'Meer opties:' (More options) and 'Combineren items met hetzelfde veld:' (Combine items with the same field). The 'Opslaan & importeren' (Save & import) button is at the bottom.

9

It is advisable to choose “combine on field”
